

Weekly Report for BME401

Date: September 9, 2013

Project Name: Pusher Syndrome Sensor

Group Number: Not yet assigned

Group Members: Jake Hoyne, David Glaubke, Pat Naureckas

Current status of project:

We have only just accepted this project since there was another group that was considering accepting the project before us. Therefore, we have yet to meet with our client, Audra Sturmoski, to discuss the project in greater detail. However, we have done some preliminary research and we believe we have a direction we wish to take the design.

Work planned for next week:

This week will be spent conducting research in pusher syndrome and the effects of a stroke on a patient, current methods of stroke rehabilitation, and current patents that may be relevant to our design. We also hope to meet with Mrs. Sturmoski to assist with our defining of the project scope.

Anything needed from client or TA or instructor to continue work:

We still need to arrange a meeting with Mrs. Sturmoski to discuss the parameters, specifications, and expectations of the project.
