

Weekly Report for BME401

Date: 9/16/13

Project Name: Pusher Syndrome Monitor

Group Number: 13

Group Members: Jake Hoyne, David Glaubke, Pat Naureckas

Current status of project:

We are currently in the research portion of the project. In the past week, we met with our client to help define the project scope, and have divided research responsibilities amongst the group. The focus of our research will be to learn more specific details about Pusher Syndrome, the current treatments, and any relevant patents with regards to the syndrome, posture, or measuring body angles.

Work planned for next week:

This week we will focus entirely on researching a multitude of information relevant to the project, as described above. Pat Naureckas will focus his research on the effects of Pusher Syndrome and current treatment options, David Glaubke will conduct a more general search into posture and ways to measure it, and Jake Hoyne will conduct a search for any relevant patents that currently exist. We will be meeting later in the week to organize more specific individual responsibilities for the project as a whole. We will also use that meeting to collaborate on our findings and modify our product specifications as needed. This will transition into the initial work on the first presentation and paper.

Anything needed from client or TA or instructor to continue work:

Nothing is needed at this time.
